

SCIENCE AT THE ROEBUCK SCHOOL

What does Science look like at The Roebuck School?

Children learn through a stimulating Science curriculum which is designed to nurture curiosity and broaden skills.

They are encouraged to think and investigate scientifically both with the support of adults and independently to develop their knowledge.

Through real-life contexts children are engaged in purposeful, hands-on activities which give them a deeper understanding of the world we live in.

What do we do in Science at Roebuck?

Our weekly Science lessons across school are supplemented by a regular Science week, visits to the University of Central Lancashire Science Fairs and link sessions at our local high school Ashton Community Science College.

Why is Science important to us?

Science enables children to find out about the world around them and how it works. Through outside learning, they can appreciate the animals and plants with which they share the planet. It broadens their understanding of everyday concepts, patterns and changes, and encourages a passion for investigation. Our work will help children to understand the uses and implications of science, today and in the future.

Our visions for Science

At the Roebuck school, we hope to create scientists within our children that challenge the stereotype that Science is only for a certain section of society. We will ensure Science is practical, engaging and purposeful and create a culture where children are encouraged to take risks, ask questions and become independent, lifelong learners who explore the world around them.
